PRODUCT IDENTIFICATION

IDENTIFICATION AND TRACKING SOLUTIONS FOR
FOOD AND BEVERAGE MANUFACTURING

TEKLYNX - SCALABLE IDENTIFICATION AND TRACKING SOLUTIONS FOR FOOD AND BEVERAGE MANUFACTURING

TEKLYNX International offers identification, tracking and mobility solutions to the food and beverage industry to increase productivity, reduce errors and reduce costs. TEKLYNX' solutions can help companies in all phases of food manufacturing from the growers to the end customer.

Bar Code and RFID Labeling

With over two dozen bar code symbologies and all leading compliance formats supported, TEKLYNX label design products allow users to meet virtually any food compliance labeling requirements. Whether you need to identify items at the pallet level or the package level, labels can quickly be designed to include SKU, UPC bar codes, EPC/RFID tags, graphics and more. All TEKLYNX label design packages are GS1 certified, and include nutritional panel/labeling templates and sample applications to make label design a breeze.

Take advantage of printing labels on demand instead of using pre-printed labels, and get the exact label you need, when you need it, with no waste. TEKLYNX' label design software has touch screen application support and can integrate scales and other peripheral devices to eliminate manual input errors.

Traceability

In addition to label design and printing, TEKLYNX has the tools to make your complex printing environment more user-friendly and secure, with a lower incidence of errors. TEKLYNX can provide the complete framework for security, traceability and version management needed for compliance requirements. You can manage the label design process and provide a secure, centralized location for design templates and all previous versions, including their print history.

TEKLYNX is the only labeling software solution provider that meets European requirements (Européenne n°178/2002) for import/export of food and food by-products.

Centralized Print Management (Server-side Printing)

Take your label printing from the desktop to the server room. TEKLYNX offers a scalable solution for integrating labeling with Enterprise Resource Planning (ERP) applications utilizing centralized, event-driven tools. Completely automate your label printing — TEKLYNX' print management software logs all jobs and input data so you can be assured of meeting ISO, EPC/RFID, EAN/GS1 and other compliance standards.

Inventory Management

Accurately manage and track your inventory in multiple locations with ease. TEKLYNX inventory management software allows for lot tracking and real-time inventory visibility using one easy-to-use tracking solution that reduces errors and increases productivity. Add mobility and connectivity to any ERP system for a completely scalable solution.

TEKLYNX software products enable the identification and traceability of food, beverage and consumer packs using bar code and RFID technology utilizing centralized event-driven tools that stand alone or interface with existing systems. TEKLYNX' mobile tracking solutions offer complete and accurate inventory management of products as they travel from the field to the consumer.

Improves Food Manufacturing Process

TEKLYNX provides complete solutions for small food manufacturers, as well as a scalable and flexible AIDC infrastructure for medium and large manufacturers, to gain efficiency and traceability for the food manufacturing processes.

Product Identification - Easily design and print bar code, nutritional, compliance and RFID labels to identify food packages, boxes and shipping containers.

Traceability & Tracking - Accurately track the geneology of manufactured food products.

Packaging/Shipping - Comply with standards of identification in hundreds of industries.

Optimize Traceability from Farm to Fork

Traceability of food is more important now than ever before. TEKLYNX software solutions can positively identify products in question should a safety recall occur, saving you time and money, and potentially saving lives. With its data collection and Enterprise computing products, TEKLYNX offers AIDC solutions that provide real-time traceability of food products all the way to the retail shelf. Even utilize scanner-equipped cell phone technology “on the farm” for real-time information.

GLOBAL ADVANTAGE

TEKLYNX is the world's largest automatic identification and data collection (AIDC) software publisher with truly global product development, technical support, sales and marketing. TEKLYNX is headquartered in Milwaukee, Wisconsin with European headquarters in Auch, France. Sales and support offices are located in Germany, the Netherlands, Singapore, China, Japan, Mexico and the United States. Development centers are located in Eau Claire, Wisconsin and Auch, France. TEKLYNX is part of a \$1.4 billion organization that employs more than 8,600 people worldwide.

TEKLYNX is the only AIDC software publisher that has attained Gold Certified status in the Microsoft Partner Program with a competency in ISV/Software and Mobility Solutions, recognizing TEKLYNX' expertise and total impact in the technology marketplace. As a Gold Certified partner, TEKLYNX has demonstrated expertise with Microsoft technologies and proven ability to meet customers' needs.

TEKLYNX - THE ONLY END-TO-END AIDC SOFTWARE SOLUTION PROVIDER FOR FOOD AND BEVERAGE MANUFACTURING

TEKLYNX offers interoperability within your systems and provides a scalable AIDC solution for food manufacturers and growers to expand their system capabilities to meet compliance requirements.

User Level

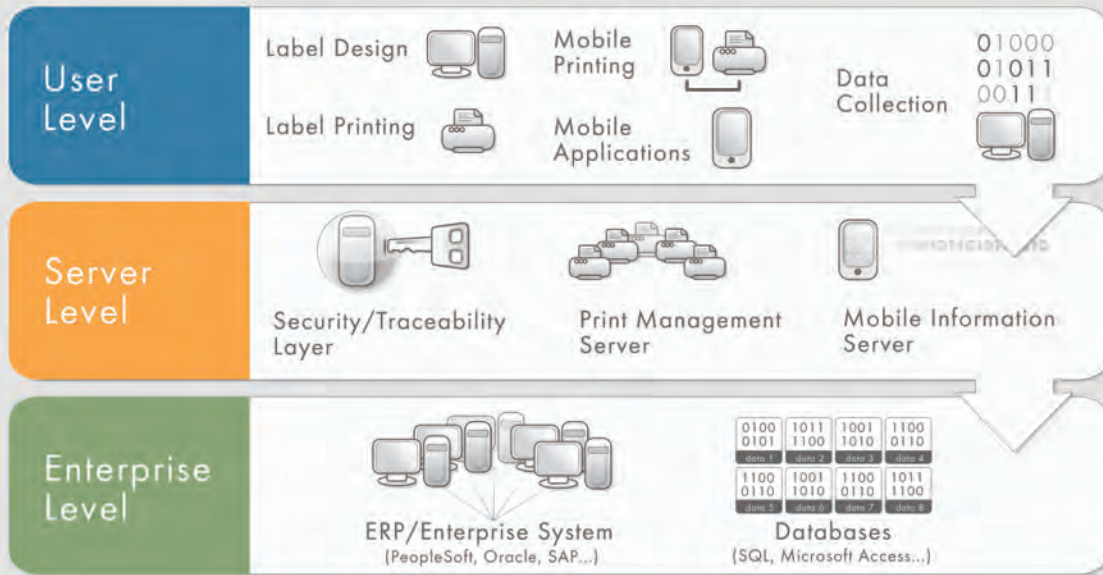

At the user level, TEKLYNX provides a number of applications and solutions including label design, data collection and mobility.

- Design and print bar code, nutritional, compliance and RFID labels
- Create data collection applications for a PC or mobile device
- Manage assets and inventory

Server/Enterprise Level

Connect your user level/desktop applications to the Enterprise. TEKLYNX' label printing and data collection architecture utilizes a many-to-one relationship to minimize the number of connections to the Enterprise system (database or ERP system). This architecture allows for a scalable, IT friendly architecture that is cost effective and practical.

- Connect to the Enterprise
- IT friendly architecture and connectivity
- Centralized security controls
- Manage hundreds of printers from one central location
- Powerful reporting features to access inventory information in real-time
- Initiate label printing from a mobile device
- Accurate and reliable communication bridge between your server, data, printing and mobile users
