BACKTRACK® Version 5.00.04

BACKTRACK 5 asset and inventory tracking software offers new features and device support that make it easier than ever to track the exact location, movement and usage of any item accurately and efficiently.

This release note documents the fixes and corrections made in version 5.00.04

Fixes and Corrections

- Fixed issue occurring in “Add” mode, where if you select the data in the Item # field and scan an asset number, it would not replace the selected data, but would instead append the scanned data to the existing data.
- On the mobile device, the caption for error and warning messages was changed from “btw” to "BACKTRACK."
- Fixed issue occurring during device application installation where the BACKTRACK application would appear to be frozen in a minimized state.
- Fixed issue where the device was allowed to continue trying to sync with the wrong application even though the two applications did not match when trying to sync.
- In Inventory tracking there is no longer a display field selected by default (was incorrectly defaulting to “Area”).
- The mobile device will now show a message for invalid locations.
- The License Libraries error message was improved to provide more helpful information.

Known Issues

For a listing of known issues, please refer to the BACKTRACK Release Notes for version 5.0.
