PRODUCT RELEASE NOTES

IDEAM™ Mobile 5.0

IDEAM Mobile 5.0 is a data collection rapid application generation tool used to create mobile data collection applications.

New Features

- Mobile Label Printing (data capture and wireless printing of labels, from IDEAM PDA to standalone printer)
- An Add Label Wizard for generating objects, screens and inputs for printing
- Fast key combination can be assigned to a button
 - Configure controls/buttons on the device to perform commands in an application
- TAB navigation for the most relevant objects can be done on PDA (for PDAs with no sensitive screen<i.e., non-touchscreen devices)
- Enhanced multistate picture button capabilities Data types can be specified for data entry/capture fields
- Ability to enter fixed values between quotes in place of variables for item properties (for example, the text of a message can be directly entered on the message property, without needing to create a variable and to link it)
- IDEAM Mobile launches when double-clicking on a .cgp file.
- Download device support updates without having to install a new version of IDEAM Mobile
- "While" operation action
 - Adds looping functionality to logic <formerly only linear logic supported >
- Formula support
- Drag and drop functionality for adding a new screen element
- Dynamic display of a picture from a file
- Logic Diagrams have been added to show application
- Launch control
- Path variables can be used in file path specification
- Ability to force an application to stay on top of all windows on a device
