Introduction

Welcome!

BACKTRACK asset and inventory tracking software combines a series of databases, an advanced label designer, and a flexible report generator into the only solution you'll need to keep track of all your items or inventory. It provides an easy way to account for the usage and location of items and inventory through functions such as time and date stamping, reservations, customized reports, and bar coded labels.

What's New?

New features in version 5 include:

- **Added Database Support** - Backend database support now includes Microsoft SQL Server 2000, SQL Server 2005, SQL Express 2005 and Microsoft Access, in addition to existing support for Microsoft Visual FoxPro
- **New Mobile Device Support** - In addition to continuing support for legacy devices, support has been added for Windows mobile devices
- **Label Designer Support** - The BACKTRACK Label Design module now supports all TEKLYNX label design programs (CODESOFT, LABEL MATRIX, LABELVIEW)
- **HTML Export Options** - Export tracking data in HTML format
- **Additional Password Protection Options** - Updated password protection options for added security

For a complete listing of all new features and corrections in this version, see the Readme file that installs with BACKTRACK.

System Requirements

Database Type to be Used with BACKTRACK	Microsoft Access Microsoft Visual FoxPro If Access or FoxPro is selected as the database type, it will be installed automatically as part of the BACKTRACK installation.	Microsoft SQL Server 2000 Microsoft SQL Server 2005 Microsoft SQL Server 2005 Express If SQL Server is selected as the database type, you have the option of using an existing instance of one of the versions listed above or installing a new instance of SQL Server 2005 Express.
Processor	Minimum: 600 MHz Pentium III-compatible or faster Recommended: 800 MHz or faster	Minimum: 800 MHz Pentium III-compatible or faster Recommended: 1 GHz or faster
Operating System	Windows 2000 Professional with SP4 Windows 2000 Server with SP4 or later Windows XP with SP2 or later Windows Server 2003 Standard, Enterprise or Datacenter edition with SP1 or later	
Memory	Minimum: 128 MB Recommended: 256 MB or more	Minimum: 192 MB Recommended: 512 MB or more
Hard Disk Space	400 MB (including 200 MB for the .NET Framework redistributable)	650 MB (including 200 MB for the .NET Framework redistributable and 250 MB for SQL Server)
Display	Minimum: 800 x 600 High Color - 16 bit Recommended: 1024 x 768 True Color - 32 bit	
Supporting Software	Microsoft Internet Explorer 6.0 SP1 or later Adobe Acrobat Reader 6.0 Microsoft ActiveSync v4.2 (if using a Windows mobile device with BACKTRACK)	

Label Designer Requirements

BACKTRACK's Label Designer module works with TEKLYNX' bar code labeling software for label creation and editing. The following TEKLYNX label design programs are supported in BACKTRACK:

- CODESOFT Enterprise edition, version 8.00.08 or higher
- LABEL MATRIX PowerPro edition, version 8.00.05 or higher
- LABELVIEW Gold edition, version 8.10.00 or higher

The label design program can be purchased as part of your BACKTRACK package, or you can use an existing installation that was purchased separately, as long as it meets the product edition and version requirements listed above.

The TEKLYNX label design program you purchase must be installed and configured separately from the main BACKTRACK program. Once installed, the Label Designer can be accessed from within BACKTRACK, allowing you to easily integrate bar code labeling into your day-to-day tracking activities.

The label design program is provided on a separate CD with a separate installation process. For proper installation, follow the documentation included with your label design program.

Device Requirements

Windows Mobile Devices

The following software and hardware components are required in order to use mobile devices with BACKTRACK:

- BACKTRACK version 5.0 or higher (includes one PDT/mobile device license) installed on the host computer
- Supported Windows mobile device (see the Readme file that installs with BACKTRACK or visit <http://www.teklynx.com/backtrack/devices> for a list of supported devices)
- Microsoft ActiveSync synchronization software v4.2 or higher (included with all Microsoft Windows powered mobile devices), installed on the host computer

For mobile devices driven by Windows CE v4.2 SE or higher (4.2 .Net, CE 5, Mobile 5, etc.), see the Readme file that installs with BACKTRACK for important setup information.

DOS-Based PDTs The following software and hardware components are required in order to use portable data terminals (PDTs) with BACKTRACK:

- BACKTRACK version 5.0 or higher (includes one PDT/mobile device license) installed on the host computer
- Supported DOS-based PDT (see the Readme file that installs with BACKTRACK or visit <http://www.teklynx.com/backtrack/devices> for a list of supported devices)

Documentation Resources

Online Help

The BACKTRACK online Help system provides detailed information on using the program functions to create and run a tracking system. To access the Help in BACKTRACK, select **Contents** from the **Help** menu. For context-sensitive Help, press the F1 key or click the **Help** button located on many dialog boxes and wizard screens.

User's Guide

The BACKTRACK *User's Guide* is provided as a .PDF file that can be viewed in Adobe Acrobat Reader and printed for easy reference. Once BACKTRACK has been installed, the *User's Guide* will be available from the BACKTRACK program group (**Start > Programs > Teklynx > BACKTRACK 5 > User's Guide**).

Note

If you do not already have Acrobat Reader installed on your PC, it is available on the BACKTRACK CD.

Readme File

The Readme file that installs with the software contains information about the most recent changes and updates to the software that were made after this guide was printed. This information supersedes what is contained in this guide.

BACKTRACK on the Web

For the most current information on product updates, supported devices, technical support FAQs and other troubleshooting tips, please visit the BACKTRACK page on the TEKLYNX web site at <http://www.teklynx.com/backtrack>.

Installing BACKTRACK

Before Installing

- Disable all anti-virus software.
- Close all other applications that are currently running.
- If you are installing an upgrade, note that the upgrade may change the program structure, making it incompatible with your current version. For this reason, before installing the upgrade you should make a backup of your tracking system using the program's **Database Maintenance > Transfer Functions > Backup** function. This backup will allow you to go back to your previous version if needed. (See the "Version Upgrades" section on page 2-10 for detailed instructions on creating a backup.)

Local administrative privileges are required for proper installation and activation. Contact your system administrator for assistance.

Software Installation

Note

If you have already downloaded and installed the current BACKTRACK Demo, there is no need to install again from the CD. Proceed to the "Activating the Software" section on page 2-12 for instructions on activating the software and converting it from a trial version to a full product.

Full Install**► To perform a full install:**

- 1 Insert the BACKTRACK 5 CD.

The CD's opening screen will appear. If the CD does not automatically open, on the taskbar, click the **Start** button, and then click **Run**. Type the letter of the CD-ROM drive followed by **CDSetup.exe** (e.g., D:\CDSetup.exe).

Figure 2-1 BACKTRACK CD Opening Screen

- 2 On the opening screen of the CD, click on the version of **BACKTRACK** you wish to install, and then click the **Install** button.

The **Preparing to Install** screen will appear, followed by the welcome screen for the installation wizard.

- 3 Follow the on-screen instructions through the wizard until you reach the **Setup Type** screen.

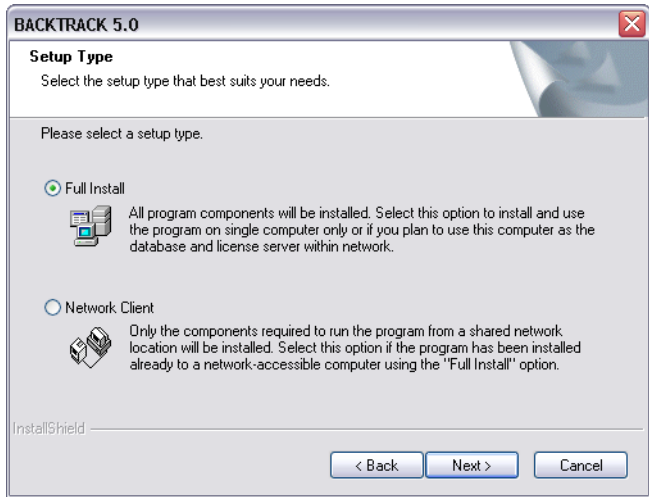

Figure 2-2 Setup Type – Full Install

- 4 On the **Setup Type** screen, click **Full Install**, and then click **Next**.

Note

For Network Client installations, see the "Network Client Install" section on page 2-7.

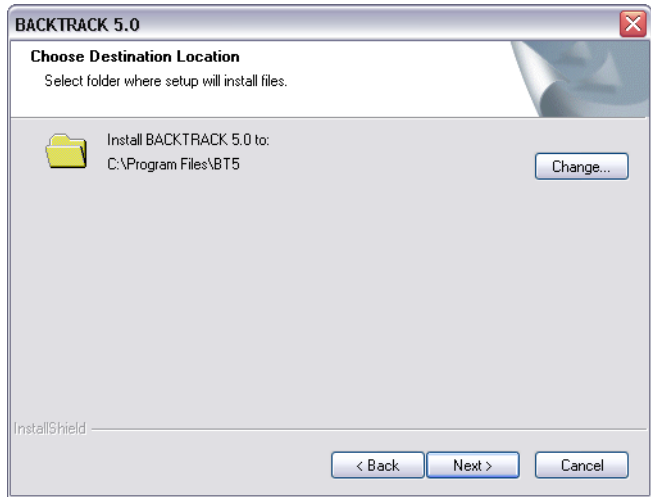

Figure 2-3 Set Destination Folder

- 5** The **Destination Folder** screen shows the default installation folder (C:\Program Files\BT5).

It is recommended that you leave the installation location at its default setting. If it is necessary to install to a different location, click the **Change** button and specify the new location.

- 6** Click **Next**.

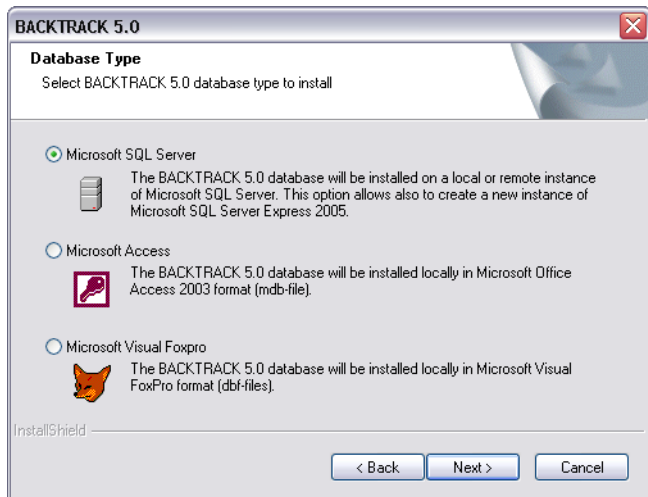

Figure 2-4 Select Database Type

- 7 On the **Database Type** screen, select one of the following database types to be used as the backend structure for the BACKTRACK database.
 - **Microsoft SQL Server:** The BACKTRACK database will be installed using an existing instance (local or remote) of SQL Server 2000, SQL Server 2005, or SQL Server 2005 Express. This option also allows you to install a new instance of SQL Server 2005 Express.
 - **Microsoft Access:** The BACKTRACK database will be installed locally in Microsoft Access 2003 format (.mdb files).
 - **Microsoft Visual FoxPro:** The BACKTRACK database will be installed locally in Microsoft Visual FoxPro format (.dbf files).
- 8 Click **Next**.
- 9 If you selected Access or Visual FoxPro as the database type, proceed to step 12. If you selected SQL Server, the following screen will appear.

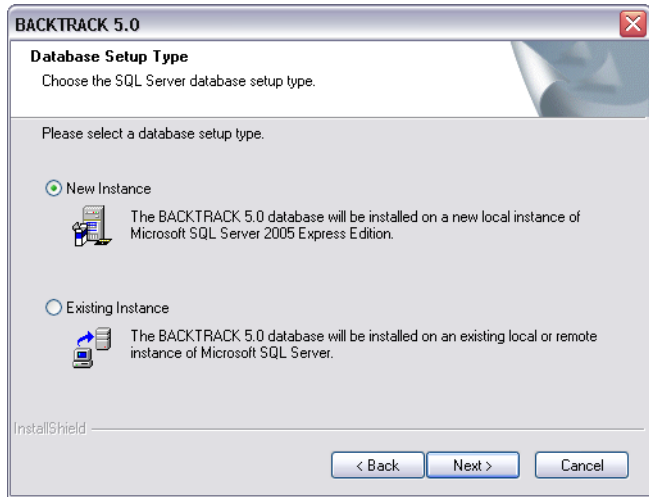

Figure 2-5 Select a Database Setup Type

- 10** On the **Database Setup Type** screen, click **New Instance** to install a new instance of SQL Server 2005 Express, or click **Existing Instance** to use an existing instance of a supported version of SQL Server.
- 11** Click **Next**.
- 12** On the **Ready to Install the Program** screen, click **Install**.

The installation wizard installs the BACKTRACK software. This may take several minutes.
- 13** If you previously selected the option to install a new instance of SQL Server 2005 Express, a series of Microsoft SQL Server 2005 Setup screens appear. Follow the wizard through the SQL Server setup.
- 14** When the installation wizard has completed the BACKTRACK install, a message appears to inform you that BACKTRACK 5 has been installed successfully. Click **Finish** to exit the wizard.

The installed BACKTRACK program can now be accessed by clicking the **Start** button and going to **Programs > BACKTRACK 5 > BACKTRACK 5.X**.

Network Client Install

► To perform a network client install:

The full install of BACKTRACK must be completed before installing the network clients. The folder to which the Full Install version of BACKTRACK is installed must be a shared network folder. (For information on setting up a shared folder or drive, refer to Windows Help.)

1 Insert the BACKTRACK 5 CD.

The CD's opening screen will appear (see Figure 2-1). If the CD does not automatically open, on the taskbar, click the **Start** button, and then click **Run**. Type the letter of the CD-ROM drive followed by **CDSetup.exe** (e.g., D:\CDSetup.exe).

2 On the opening screen of the CD, click on the version of **BACKTRACK** you wish to install, and then click the **Install** button.

The **Preparing to Install** screen will appear, followed by the welcome screen for the installation wizard.

3 Follow the on-screen instructions through the wizard until you reach the **Setup Type** screen.

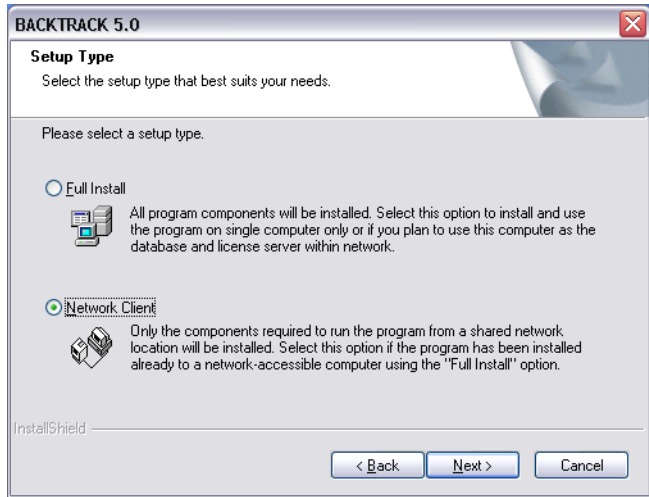

Figure 2-6 Setup Type – Network Client

- 4** On the **Setup Type** screen, select **Network Client**, and then click **Next**.

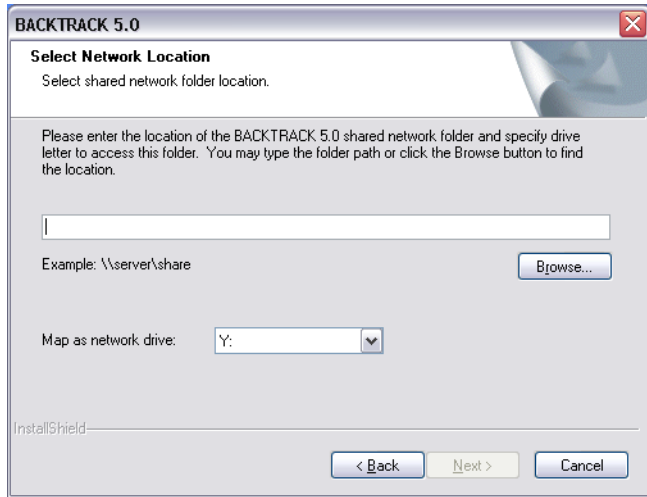

Figure 2-7 Select Shared Network Folder

- 5 On the **Select Network Location** screen, type the full UNC path to the BACKTRACK program file (**btw.exe** file) located in the shared network folder of the full BACKTRACK installation. Use the following syntax:

\\PCName\SharedFolderName\btw.exe

Alternatively, you can click **Browse** and browse to the shared folder of the full BACKTRACK install. Within that folder, click on the **btw.exe** file, and then click **Open**.

- 6 In the **Map as network drive** box, specify the drive letter to use to access the shared network folder.
- 7 Click **Next**.

The installation wizard configures the network client settings. When the wizard has completed the install, a message appears to inform you that BACKTRACK 5 has been installed successfully.

- 8 Click **Finish** to exit the wizard.

The BACKTRACK program can now be run from the shared network folder by clicking the **Start** button and going to **Programs > BACKTRACK 5 > BACKTRACK 5.X**.

For a network setup with the BACKTRACK Full version running on a computer under Windows 2000 Server, Windows XP, or Windows Server 2003, the Network Client computer may receive an "Unable to load license libraries..." error on startup. See the Readme file that installs with BACKTRACK for information on resolving this issue.

Version Upgrades

If you are installing an upgrade, note that the upgrade may change the program structure, making it incompatible with your existing version. For this reason, before installing the upgrade you should make a backup of your existing tracking system. Then after installing the new software, you can use the Restore function to restore all BACKTRACK databases (for all existing applications), as well as all reports and labels that were previously created.

The following instructions cover the aforementioned process of performing a backup, installing your upgrade, and then restoring data from your backup.

► To upgrade your BACKTRACK software

- 1 Start your existing (older) version of BACKTRACK.
- 2 On the Main Menu, click **Database Maintenance**.
The **Database Maintenance** dialog box appears.
- 3 Click **Transfer Functions**, and then click **Backup**.

The **Backup** dialog box appears.

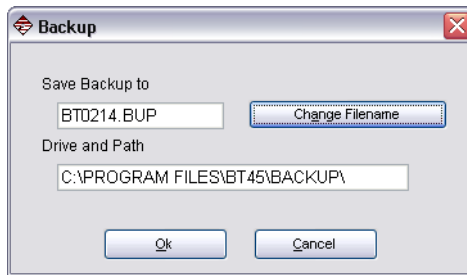

Figure 2-8 Backup File Name and Path

- 4 Make a note of the backup file name, its path, and the date/time of the backup. Then, when you restore the data in the new software later, you will know where to find it.
- 5 Set the backup file name and path, and then click **OK**. (BACKTRACK assigns a default file name to the backup file, which you can change by clicking **Change File-name**.)

Note

The default file name includes the current month and day (e.g., "BT0919.BUP").

- 6 If you have links to external files, such as to graphic or relational databases, you can select to include them in the backup process. Click **OK**.

BACKTRACK processes the backup and displays a message when the process is complete.

- 7 Proceed to install your BACKTRACK upgrade according to the instructions in the "Full Install" section on page 2-2.

Once the new software has been installed, you are now ready to restore the backup you created previously.

- 8 Start your new (upgraded) version of BACKTRACK.
- 9 On the Main Menu, click **Database Maintenance**.

The **Database Maintenance** dialog box appears.

10 Click **Transfer Functions**, and then click **Restore**.

The **Restore** dialog box appears.

11 Click the **Browse** button and browse to locate the backup (.bup file) you created previously, and then click **Select**.

12 Click **OK**.

13 Follow the on-screen prompts until you have finished restoring the data.

Your newly upgraded BACKTRACK software is now ready to use with all data restored from your previous tracking system.

Adding Users or Mobile Device Licenses

If you are simply adding users or mobile device licenses to an existing installed product, you do NOT need to reinstall the software.

► **To add users or mobile device licenses:**

- If you have purchased add-on user licenses or mobile device licenses, your product box will contain an upgrade program document that includes a printed label with your product serial number. To install the user licenses or mobile device licenses, follow the detailed instructions included in the document.

Activating the Software

Once you have installed BACKTRACK, the Activation Wizard will take you through the process of activating the software.

► **To activate the software:**

1 Start BACKTRACK.

A welcome screen appears displaying options to activate the software immediately or to try it for an evaluation period.

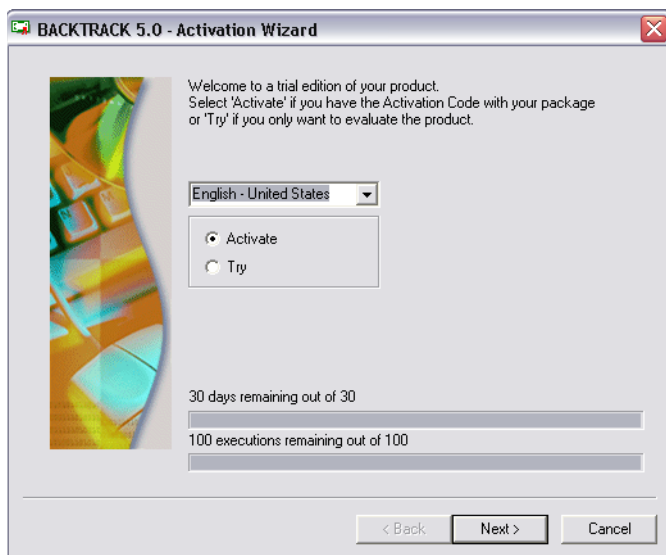

Figure 2-9 Activation Wizard

2 Click **Activate**, and then click **Next**.

The **Select Activation Mode** screen appears.

Figure 2-10 Select Activation Mode

- 3 Select from three options for the activation method (**Automatic (Internet)**, **Fax/e-mail**, or **Telephone**), and then click **Next**.
- 4 Depending on the activation method selected, follow the appropriate steps to complete the activation process.

Note

Once the software has been activated, the Activation Wizard will no longer appear upon startup, and you will be able to use the software with all features and functionality enabled.

Automatic (Internet) Activation Method

- 1** Fill in all required fields on the **User Registration** screen, and then click **OK**.
- 2** On the **Internet Activation** screen, enter the Activation Code you received with the product, and then click **Next**.

A message will appear to inform you that activation was successful. If any problems are encountered, a message will inform you that activation has failed.
- 3** Click **Finish** to complete the activation process.

Fax/e-mail Activation Method

- 1** Fill in all required fields on the **User Registration** screen, and then click **OK**.
- 2** On the **Activation Code** screen, enter the Activation Code you received with the product, and then click **Next**.
- 3** Click the **Create Form** button.

An Activation Request Form will be created with all of the required user information. This form must be sent via fax or e-mail in order to receive a Response Code. For sending instructions, please refer to the contact information given on the screen.

- 4** Click **Next**.

While waiting for a Response Code, you may choose to launch your software and begin using it, or close it and return to the activation process once you have received your Response Code. (**Note:** Once you return to the wizard, all options you previously selected in the wizard will be retained.)

- 5** Once you have received your Response Code, you can return to the activation process by restarting the wizard and then clicking **Next** until you reach the screen that includes the option to **Enter the Response Code**.

- 6 Enter the Response Code provided to you, and then click **Next**.

A message will appear to inform you that activation was successful. If any problems are encountered, a message will inform you that activation has failed.

- 7 Click **Finish** to complete the activation process.

Telephone Activation Method

- 1 On the **Phone Activation** screen, enter the Activation Code you received with the product, and then click **Next**.
- 2 Call the appropriate phone number for your area (provided on the screen).

You will be required to give all user registration information over the phone, so please have your company information at hand before calling.

- 3 Enter the Response Code provided to you, and then click **Next**.

A message will appear to inform you that activation was successful. If any problems are encountered, a message will inform you that activation has failed.

- 4 Click **Finish** to complete the activation process.

Troubleshooting Installation Issues

The following table lists the most common error messages, issues, and questions encountered when installing the BACKTRACK software.

For the most current information on installation issues and troubleshooting tips, please reference the BACKTRACK page on the TEKLYNX web site at <http://www.teklynx.com/backtrack>.

Problem/Question	Solution
I'm trying to install the software but it's asking me for a code in order to "activate" it? Where do I get this code?	An Activation Code is provided in your product box.
What happens if I lose my Activation Code?	Please contact TEKLYNX Customer Service at 888-629-4444 or e-mail customerservice@teklynx.com . You will need to provide them with the serial number on your invoice or from the product box. They can then re-issue an Activation Code.
What if the PC crashes or I need to transfer the license to another PC?	You must contact Customer Service and provide them with your Activation Code. Another authorization code will be given to reactivate the product.

(Table continued from previous page)

Problem/Question	Solution
What if the PC crashes in the middle of the night, over the weekend, or on a holiday - how can I reactivate the product with no down time?	By installing the CD on another PC, you start with a grace period during which you run the software as a trial version. All product features will be available during that period, which gives you time to continue using the software with no down time, until you can contact Customer Service to reactivate your product.
What happens if I uninstall the software by accident and need to re-install it on the same PC later?	As long as you have not formatted your hard disk, your product will run without requiring a new Activation Code.
I lost the CD and I need to re-install the software. What do I do?	If you lost the CD and need to re-install, you can download the re-installation files from the TEKLYNX web site at http://www.teklynx.com . As long as you are installing to the same PC and have not formatted your hard disk, this is all that is needed to re-install the software.
I installed a demo version that I downloaded from the web site. Can I turn this into a full license without having to re-install the product?	Yes. When you purchase a product you will receive an Activation Code. You can use this Activation Code to activate the trial version without having to re-install.
How do I know that the CD I received contains the latest release of the software, including any recent patches or updates?	You can verify this by checking your software version number against the version number of the BACKTRACK Demo found at http://www.teklynx.com . The BACKTRACK Demo is always updated with the most recently released version of the software. Please verify that your version matches the Demo version.

(Table continued from previous page)

Problem/Question	Solution
<p>Error 1706: No valid source could be found for product BACKTRACK 5.0. The Windows Installer cannot continue.</p>	<p>This is actually an InstallShield error and does not affect your BACKTRACK installation. More information on this issue can be found in the BACKTRACK Readme file.</p> <p>Additional information can also be found on the following InstallShield and Microsoft Web sites: http://support.installshield.com/kb/view.asp?articleid=Q107140 http://support.microsoft.com/kb/299803/</p>
<p>I am getting an "Unable to load license libraries..." error when trying to start BACKTRACK on a Network Client computer. What can I do to fix this?</p>	<p>For a network setup with the BACKTRACK Full version running on a computer under Windows 2000 Server, Windows XP, or Windows Server 2003, the Network Client computer may receive the "Unable to load license libraries..." error.</p> <p>To provide access to the license libraries you must configure the DCOM settings on the computer that is running the BACKTRACK Full version. See the BACKTRACK Readme file for detailed instructions on this process.</p>
<p>I am having trouble getting my Windows Mobile 5 device to work with BACKTRACK. What should I do?</p>	<p>For mobile devices driven by Windows CE v4.2 SE or higher (4.2 .Net, CE 5, Mobile 5, etc.), special configuration steps must be followed in order for the device to work successfully with BACKTRACK.</p> <p>See the BACKTRACK Readme file for detailed instructions on this process.</p>
