TEKLYNX and Zebra Know the Fast Track to Better Efficiency:
Save Time, Cost, and Labor with Print Automation

During a pandemic, recession, or other unexpected shift in business operations, organizations must find ways to cut costs and do more with less. At TEKLYNX International, we're doing our part by helping companies automate their barcode label printing operations and achieve new levels of efficiency to counteract decreasing operational headcounts and fewer overall resources. With print automation software, you can eliminate manual steps, save costs, and seamlessly track and move products through the supply chain with TEKLYNX and Zebra label design and printing solutions.
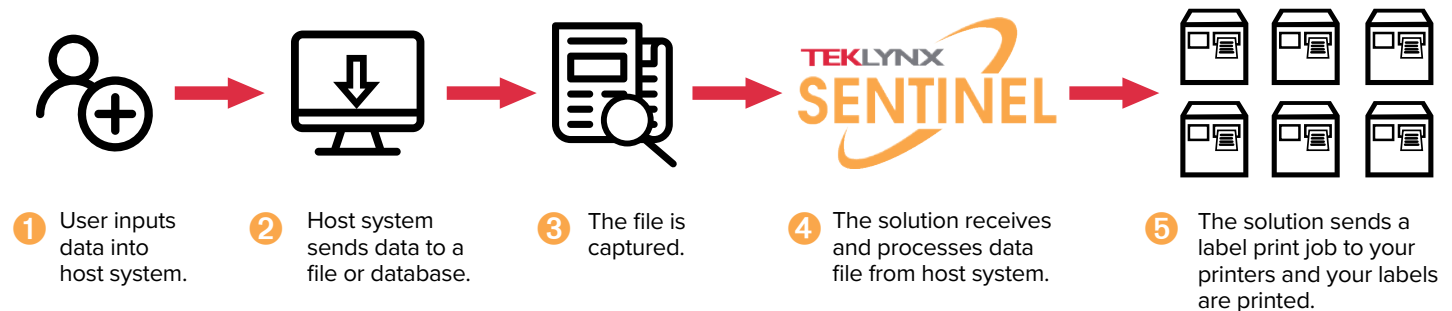

TEKLYNX SENTINEL Print Automation Solution

Eliminate the need for manual data entry, reduce errors, and simplify the printing process with label printing automation. Print automation is a centralized technology solution that replaces the manual process of triggering a print job to your Zebra printers in any labeling environment. With TEKLYNX print automation software, SENTINEL, organizations can achieve significant benefits:

- Completely automate your label printing process
- Minimize manual human labor
- Print to an unlimited number of Zebra printers simultaneously
- Initiate printing directly from any business system
- Realize greater ROI by better leveraging existing systems

How It Works

Watch quick overview and see key features.

1. User inputs data into host system.
2. Host system sends data to a file or database.
3. The file is captured.
4. The solution receives and processes data file from host system.
5. The solution sends a label print job to your printers and your labels are printed.

TEKLYNX SENTINEL print automation software integrates easily with your business systems: Oracle, SAP, Microsoft Dynamics, JD Edwards, and many others, including custom applications.

It automatically pulls and applies any data from your business system to the right label template at the right time and triggers printing to the right Zebra printer.

You can automatically print order numbers, product information, lot numbers, shipping addresses, packing lists, and any other variable data you need from your ERP.

Without requiring human interaction, print jobs are triggered automatically by an action in your business system or the information sent to your database.

Compatible with All Zebra Printers

TEKLYNX has native printer drivers for all Zebra desktop, mobile, industrial, and RFID printer models, including ZT Series and ZQ Series printers. With one simple and centralized solution, you can ensure labels are printed accurately and efficiently from a desk, production line, loading dock, forklift, and more.

Common Profile

Organizations that benefit from SENTINEL print automation software typically have more complex labeling needs with greater than five desktop, industrial, or mobile printers and the desire to print directly out of another business system or front-end application. SENTINEL helps organizations with lean manufacturing initiatives that are seeking to reduce waste and costs across their operations. SENTINEL can scale up and enable printing to an unlimited number of Zebra printers across the entire enterprise.
