

# HOW TO IMPROVE LABELING QUALITY THROUGH BETTER CONNECTIONS

Use these tips to learn how to have better quality labels.

## 1 SET UP A LABEL APPROVAL PROCESS

Create and enforce a label approval process from design, to approval, to print. Only approved labels enter production, ensuring only labels with accurate information can be printed.

The why and how of a label approval process ►

## 2 USE A BARCODE VERIFICATION SOLUTION

Use a barcode printer and verifier to scan, verify, and grade each barcode that is printed. Results are reported back to your label traceability software, so you never have to worry about bad quality barcodes.

## 3 LEVERAGE NATIVE EMBEDDED PRINT DRIVERS

Embedded printer drivers ensure crystal clear communication, since the software speaks the native language of the printer. With "What You See Is What You Get" label printing, you don't need to slow down because of redesigning and reprinting.

Take a look at available printer drivers ►
