

4 Ways to Remove Manual Steps From Your Printing Process

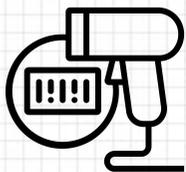

Greater demand for production efficiency is leading to an increase in automation and digital transformation. Removing manual steps from your printing process and adding automation can reduce errors, eliminate waste, and save your company money.

Here are four ways to remove manual steps from your barcode label printing process.

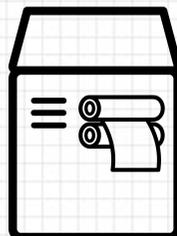

Mid-level automation

1 - Scan and print

Scan an item

Print!

Trigger labeling print jobs by scanning your work order for the day!

How Can It Help You?

Remove the manual step of clicking print

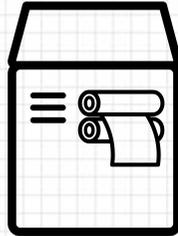

Mid-level automation

2 - Weigh and print

Weigh an item

Print!

Pre-populate your business system with items and their corresponding information to trigger a print job when an item is weighed.

How Can It Help You?

No more manually typing in weights

Fully Automated

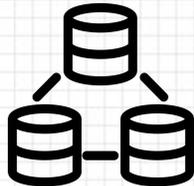

3 - Action in a Business System

What is it?

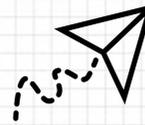

Labeling system monitors a database to populate variable data and automatically print labels

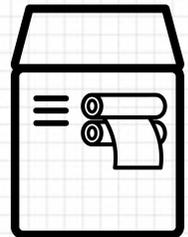

Add data to business system

Database receives & processes data

Database sends label print job

Labels print!

Ways to Automate Your Print Job:

- System generates a flat file (CSV, TXT, XML)
- Database record additions (Oracle, SQL)
- Programmatic integration (API)

How Can It Help You?

Less time spent interacting with your label designer, as it is now fully integrated with your business system

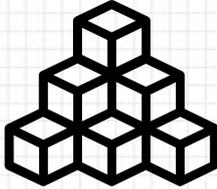

Fully Automated

4

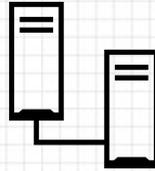

- Batch Automation

What is it?

System-generated print jobs for labels and documents in batches

Business system compiles data

Data is sent to labeling system in batches

Labels and document print!

Processes run on a defined schedule so labels and documents are ready to go when you need them

How Can It Help You?

No human interaction required to generate labels and documents
